

# Package: ipfp (via r-universe)

September 8, 2024

**Type** Package

**Title** Fast Implementation of the Iterative Proportional Fitting Procedure in C

**Version** 1.0.2

**Author** Alexander W Blocker

**Maintainer** Alexander W Blocker <ablocker@gmail.com>

**Description** A fast (C) implementation of the iterative proportional fitting procedure.

**License** Apache License (== 2.0)

**LazyLoad** yes

**URL** <https://github.com/awblocker/ipfp>

**RoxygenNote** 7.1.2

**Repository** <https://awblocker.r-universe.dev>

**RemoteUrl** <https://github.com/awblocker/ipfp>

**RemoteRef** HEAD

**RemoteSha** 2100016c76f8d85a1bde4fd479ffb8ed427a37af

ipfp	<i>Function to run IPFP (iterative proportional fitting procedure)</i>
------	------------------------------------------------------------------------

---

## Description

Use IPFP starting from  $x_0$  to produce vector  $x$  s.t.  $Ax = y$  within tolerance. Need to ensure that  $x_0 > 0$ .

**Usage**

```
ipfp(
  y,
  A,
  x0,
  tol = sqrt(.Machine$double.eps),
  maxit = 1000,
  verbose = FALSE,
  full = FALSE
)
```

**Arguments**

<code>y</code>	numeric constraint vector (length <code>nrow</code> )
<code>A</code>	constraint matrix ( <code>nrow</code> x <code>ncol</code> )
<code>x0</code>	numeric initial vector (length <code>ncol</code> )
<code>tol</code>	numeric tolerance for IPFP; defaults to <code>sqrt(.Machine\$double.eps)</code>
<code>maxit</code>	integer maximum number of iterations for IPFP; defaults to <code>1e3</code>
<code>verbose</code>	logical parameter to select verbose output from C function
<code>full</code>	logical parameter to select full return (with diagnostic info)

**Value**

if not full, a vector of length `ncol` containing solution obtained by IPFP. If full, a list containing solution (as `x`), the number of iterations (as `iter`), and the L2 norm of  $Ax - y$  (as `errNorm`)

**Examples**

```
A <- matrix(c(1,0,0, 1,0,0, 0,1,0, 0,1,0, 0,0,1), nrow=3)
x <- rgamma(ncol(A), 10, 1/100)
y <- A %*% x
x0 <- x * rgamma(length(x), 10, 10)
ans <- ipfp(y, A, x0, full=TRUE)
print(ans)
print(x)
```
